

Cosmetic dentist in Jupiter area offers CEREC restorations

Dr. Steven A. Burman of Burman Dental, LLC in the Jupiter area is known for his natural results Cosmetic Dentistry. He uses a variety of procedures and advanced technologies for smile rejuvenation. Using CEREC, he is not only able to restore the smile, but do so with same-day restorations.

CEREC technology is a wonderful method of dealing with the fabrication of esthetic crowns and fillings. These porcelain restorations are used to repair the teeth when patients experience breakage, trauma, tooth loss, or even large areas of decay. Traditional Jupiter area dentists need to prepare the teeth, take impressions, send them to a ceramist in a lab (often out of state), then wait several weeks before they are completed and returned to the practice for the final placement. In the meantime, patients typically deal with temporary restorations and have to book more than one visit at the dental office.

Instead, Dr. Steven Burman uses this advanced technology to offer his patients same-day crowns, fillings, inlays and onlays. CEREC uses CAD/CAM technology to digitize impressions and mill out a restoration right in the dental office. Patients can rest in the dental chair while the impressions are made and sent to the machine for preparation and completion. Then, Dr. Steven Burman bonds the new porcelain restoration in place so that patients can leave the dental office with their treatment complete and a beautiful, natural-looking smile. No more waiting for restorations from an outside lab, no need to schedule a second appointment, no temporary restorations, and no gooey impressions! Dr. Steven A. Burman is excited to offer this technology to his patients to make the visit more comfortable while saving patients time and money. This technological advance is an ideal investment that Dr. Steven Burman has added to his practice for an optimal patient experience!
