

Laser dentistry is safe and effective for removal of tooth decay and soft tissue procedures

Laser technology has played a critical role in modern medicine, including dentistry. Laser procedures benefit the professional, patient, and industry by providing precision resulting in less-invasive treatments, and improved healing time. Lasers use extremely focused, intense beams of light energy to remove and shape tissue.

At Burman Dental, L.L.C., located in Jupiter, Florida, and serving patients from Palm Beach Gardens, Juno Beach, Tequesta, and surrounding communities, Dr. Steven A. Burman is committed to investing in technologies and equipment to enhance patient comfort, health, safety, and appearance. As past president and board member of the Academy of Laser Dentistry and a respected speaker, author, educator, and media spokesman, Dr. Burman remains at the forefront in dental advances.

Laser technology offers many applications in general and cosmetic dentistry. One area where laser dentistry has made a significant difference is decay removal. Whereas a traditional dental drill may have evoked fear and anxiety for patients in the past, laser removal of damaged or decayed hard tissue prior to restorative treatments such as a filling or crown, is accomplished with a gentle and precise laser. The procedure not only reduces patient stress, but also allows Dr. Burman to preserve more healthy tooth structure.

Laser dentistry also replaces the conventional scalpel and stitches used for many tissue procedures, including:

- Gum contouring - precision sculpting results in symmetrical, healthy, and ideally-contoured gums with minimal discomfort, less risk of bleeding and no need for sutures
- Biopsies
- Tongue-tie release by correcting those attachments that impair speech or eating skills
- Excess soft tissue removal

In addition to the benefits of enhanced accuracy and patient comfort, laser dentistry reduces post-surgical discomfort and recovery time while eliminating bacteria for optimal healing and prevention of infection.

Laser technology is just one of the many technological advances offered at Burman Dental, L.L.C. to help patients look forward to visiting the dentist, achieve lifelong oral health, and love their smile.

Appointments and consultations may be conveniently requested online or by contacting the friendly and professional team today at 561-404-4325. Burman Dental, L.L.C. is located at 224 Chimney Corner Lane, Suite 3022, in Jupiter, Florida.
