

Experience Laser Dentistry with Dr. Steven A. Burman

Lasers have been making dental procedures more comfortable and less invasive since 1990 when the first laser was approved for soft tissue procedures in the dental office. For patients hesitant in visiting the dentist due to anxiety related to needles, drilling, numbness, pain, or bleeding, laser dentistry can change the perception and experience of the visit. For individuals seeking comfortable, modern treatment, advanced technology is essential.

Lasers represent innovative and precise technology for specific, minimally-invasive dental applications for the effective removal of decay or diseased tissue without compromising healthy structures while improving healing, reducing infection, decreasing anxiety, minimizing chair time, and creating comfortable dental experiences. Lasers can be used for soft tissue procedures without general anesthesia, scalpel, or sutures for: bacteria elimination to improve periodontal health, canker sores, cosmetic gum shaping, and tongue-tie treatment, often without bleeding, swelling, or postoperative discomfort.

Since decay must be removed before a filling or crown is placed, a laser can quickly and precisely remove it without the whining drill noise, messy particles, or anesthetic injection, in most cases. From start to finish, the procedure is relaxing.

"Exposed to lasers early in my career, I've gained vast experience using them for decay removal and soft tissue procedures. I was a clinical investigator in FDA trials for laser decay removal, have trained other dentists, lectured on laser technology, and was the youngest dentist elected President of the Academy of Laser Dentistry in 2010. For the past 21 years, I've been committed to investing in advanced dental technology to increase patient comfort while decreasing chair time thereby helping many patients overcome dental anxiety. "

Everyone deserves to experience dentistry as it should be: comfortable, thorough, conservative, efficient, safe, and honest with natural cosmetic results. Call 561-404-4325 to schedule your visit or to learn more about how we can help you achieve a healthy, beautiful smile during comfortable dental visits using advances like our Solea laser (www.convergentdental.com), CEREC one-visit porcelain crowns, OralID oral cancer detection, and computer-assisted anesthesia.
